December 11, 2018, update for Project Server 2013 (KB4461461)

This update fixes the following issues when you work in Project Detail Pages (PDPs):

- You can't type multiple digits in a cost type field. Therefore, the **Cost** value is not displayed as expected.

- If you can select lookup table values from fields that have lookup tables associated with them, when you save the project and then come back to it, the values that you selected earlier were not saved.

December 11, 2018, update for SharePoint Enterprise Server 2013 (KB4092471)

- After the security update 4032239 is applied, Word 2013 may crash.

Description of the security update for SharePoint Enterprise Server 2013: December 11, 2018 (KB4461549)

This update fixes a vulnerability with the following changes:

- All existing Search Results Web Parts are automatically switched to use asynchronous loading.

- All newly created Search Results Web Parts use asynchronous loading.

- Loading behavior is no longer an option in the Search Results Web Part properties user interface (UI).

See KB 4052414 for details.

Description of the security update for SharePoint Enterprise Server 2013: December 11, 2018 (KB4092472)

After security update KB 4032239 is applied, Microsoft Word 2013 may crash.

Note To fix this issue, you must install the following update together with this update:

- Description of the security update for Office Web Apps Server: December 11, 2018 (KB 4461551)

Description of the security update for SharePoint Foundation 2013: December 11, 2018 (KB4461558)

- This security update resolves vulnerabilities in Microsoft Office that could allow remote code execution if a user opens a specially crafted Office file. To learn more about these vulnerabilities, see Microsoft Common Vulnerabilities and Exposures CVE-2018-8635.

Description of the security update for SharePoint Enterprise Server 2016: December 11, 2018

This security update contains improvements and fixes for the following nonsecurity issues for SharePoint Server 2016:

- If there is a "Multiple lines of text" column in a SharePoint list and the "Enhanced rich text " setting is applied to this column, the content in the column may not be always searchable in a search crawl.

- After you apply an update, the database reporting association views aren't regenerated as expected when the SharePoint Configuration wizard is run.

- After security update KB 4032233 or KB 4032256 is applied, Word 2016 may crash.

This update also fixes a vulnerability through the following changes in SharePoint Server 2016:

- All existing Search Results Web Parts are automatically switched to use asynchronous loading.

- All newly created Search Results Web Parts use asynchronous loading.

- Loading behavior is no longer an option in the Search Results Web Part properties user interface (UI).

See KB 4052414 for details.

This security update contains improvements and fixes for the following nonsecurity issues for Project Server 2016:

- This update provides the UpdateCreatePDP method so that you can set the "New Project Page" Project Detail Page (PDP) for an enterprise project type (EPT) through the Client-Side Object Model (CSOM).

- While on the Timesheet Adjustment page, you click the **Filter** button and then you manually enter a Custom Date Range date that is outside of the allowable range for the project (such as between 1/1/1984 and 12/31/2149). When you then click the **Apply**button, the page fails to load and becomes unrecoverable. You see the following error message:

  "Sorry, something went wrong.
  Your request has failed for an undetectable reason; you may need to contact your system or database administrator."

Description of the security update for SharePoint Server 2019: December 11, 2018

This security update contains the following non-security improvement/fix:

- Administrators for site collections in a web application that uses a Security Assertion Markup Language (SAML) Claims provider for authentication can't be added as Term Store Administrators in the Term Store Management Tool.
