May 10, 2016, update for Project Server 2013 (KB3115036)

- When you try to edit the name of an enterprise resource in your project, a better translation is available for the Japanese language for the following message that appears:

  Changes to enterprise resources will be lost.

  You can modify an enterprise resource in a project for modeling purposes and publishing the project will include any changes. Your changes will be overwritten when the project is next opened.

- Fixes the following issues:

  o On your timesheet, you enter an actual work value that's after the task start date or you enter an actual start date that's after the task's start date. When the status update is applied to the project, the task's actual start date isn't updated accordingly to the assignment actual start date.

  o Assume that you press the Tab key to move the focus on a column header on the Manage Timesheets page. Then, you press the Enter key in order to sort by this field. In this situation, the focus is lost from the column header, and you have to press the Tab key many times in order to return to the column header.

  o Self-assigned timesheet lines may display an incorrect TASKUID in the OData feed.

  o The project start date on a project detail page, such as Project Details, is different from the date in the Project Information dialog box in Project Professional 2013.

- When you try to query OData from a workflow in Project Server 2013, an access denied error message is displayed.

- Consider the following scenario:

  - You have an enterprise project level flag field defined.

  - You have this field displayed on a Project Detail Page (PDP).

  - A user goes to the PDP page and by-default sees the value of No.
  - The user saves and moves to a different PDP page.

  - The user then goes to a different or the previous same PDP page.

    In this case, the value is empty or NULL versus the expected No value.

May 10, 2016, update for SharePoint Foundation 2013 (KB3114952)

Translates the following error message in Norwegian to make sure that the meaning is accurate:
Sorry, this site hasn't been shared with you.

May 10, 2016, update for SharePoint Server 2013 (KB3114943)

Fixes the following issue:
After you switch views in an InfoPath form in Internet Explorer 11, the People Picker control displays the following error message:
JSON IS UNDEFINED

May 10, 2016, update for SharePoint Server 2013 (KB3114931)

Fixes the following issue:
If the conditional formatting rule is set to **Show Icon Only** and users have Excel Services Viewers permissions, Excel Services doesn't display conditional formatting icons.

May 10, 2016, update for Office Web Apps Server 2013 (KB3115022)

Translates some terms in multiple languages to make sure that the meaning is accurate.

May 10, 2016, update for SharePoint Server 2013 (KB3115018)

- Updates the Danish proofing tools.

- Improves taxonomy change tracking performance, and the term store won't be offline even if many changes are made.

- Translates the SharePoint Server 2016 hybrid search and changes user experience in multiple languages to make sure that the meaning is accurate.

- Fixes the following issues:

  - When you use Managed Metadata Navigation and filtering, you experience the following two issues:

    - The halo around the active item in the menu is truncated.

    - The separator of the navigation bar is displayed with inconsistent width if you resize or refresh the window.

  - A screen reader detects tabs in the Term Store Management Tool as a single H3 header incorrectly.

  - The Content Query Web Part doesn't load the correct entries when a user field is queried with a not-equal-to filter.

  - When you create a list item with a taxonomy field while using JAWS, the suggestions for the taxonomy field are not accessible.

  - When you spell check an incorrect word that's split across multiple formatting tags, you may receive a generic error message about this word or the content format is changed.

  - Custom managed property that contains special characters (such as an apostrophe) isn't highlighted when it's searched.

  - Index component crashes randomly.

  - When you try to insert links from SharePoint to upload files to sites, unexpected error occurs if the site names have non-ASCII characters.

  - When you drop RTF email messages from Outlook clients to a document library, the email bodies aren't indexed and nor searchable. This update improves the extraction of RTF email body text from .msg files.

○ You can't change the regional settings and receive the following error message:

Server Error in '/' Application.

This issue occurs after you install [February 9, 2016, update for SharePoint Server 2013 (KB3114719)](#).

○ Assume that you use a querystring URL parameter to pass values at the query time. When a user selects a specific taxonomy term, using the term GUID to search, the search doesn't work.

May 10, 2016, update for SharePoint Foundation 2013 (KB3115034)

Fixes the following issues:

- Property demotion doesn't work for Word documents that contain ink objects. This update also fixes property demotion that corrupts data of [Office Mix add-in](#) for PowerPoint.

- If forms authentication is enabled in a nondefault (extended) zone, users can't get permissions to edit Office Web Apps Server (WAC) documents that are granted through a group membership.

- When you spell check an incorrect word that's split across multiple formatting tags, you may receive a generic error message about this word, or the content format is changed.

- When you press the Tab key on the Add Task page, the visual focus appears in the Task Name text box instead of moving to the first new form field of the %Complete text box.
- A screen reader doesn't announce specific column headers in the Tables mode.

- A screen reader doesn't announce check boxes in the Tables mode.

- A screen reader doesn't read app name for the ellipsis on the Site Contents page.

- Some elements on the Add an App page aren't marked up for accessibility.
- When you focus a check box in the grid on the **Resource Center** page, nothing is read by the screen reader because the column doesn't have a header.

- You can't use keyboard to expand or collapse groupings in the grid on the **Resource Center** page.

- If the Notes field of a task contains special characters in a project detail page, the project detail page isn't displayed but keeps loading.
