May 14, 2019, update for SharePoint Enterprise Server 2013 (KB4464559)

This update fixes the following issues:

- When multiple SharePoint farms use the same extended zone and consume a published search service application, search queries from this extended zone don't return results.
- Users who are subsite members but not root site members can't run search in subsites, after they trigger the search query button, they will get an access denied issue. This issue occurs after they install Description of the security update for SharePoint Enterprise Server 2013: December 11, 2018.

Description of the security update for SharePoint Foundation 2013: May 14, 2019

This security update resolves vulnerabilities in Microsoft Office that could allow remote code execution if a user opens a specially crafted Office file. To learn more about these vulnerabilities, see the following:

- Microsoft Common Vulnerabilities and Exposures CVE-2019-0949
- Microsoft Common Vulnerabilities and Exposures CVE-2019-0950
- Microsoft Common Vulnerabilities and Exposures CVE-2019-0951
- Microsoft Common Vulnerabilities and Exposures CVE-2019-0952
- Microsoft Common Vulnerabilities and Exposures CVE-2019-0956
- Microsoft Common Vulnerabilities and Exposures CVE-2019-0958
- Microsoft Common Vulnerabilities and Exposures CVE-2019-0963

This security update contains a fix for the following nonsecurity issue:

- The date on a task displays **Heisei** after it's saved in the new Japanese era (**Reiwa**) on the **My Tasks** page.

May 14, 2019, update for SharePoint Enterprise Server 2013 (KB4464559)

This update fixes the following issues:

- When multiple SharePoint farms use the same extended zone and consume a published search service application, search queries from this extended zone don't return results.

- Users who are subsite members but not root site members can't run search in subsites, after they trigger the search query button, they will get an access denied issue. This issue occurs after they install [Description of the security update for SharePoint Enterprise Server 2013: December 11, 2018](#).

Description of the security update for SharePoint Enterprise Server 2016: May 14, 2019

This security update resolves vulnerabilities in Microsoft Office that could allow remote code execution if a user opens a specially crafted Office file. To learn more about these vulnerabilities, see the following:

- [Microsoft Common Vulnerabilities and Exposures CVE-2019-0949](#)
- [Microsoft Common Vulnerabilities and Exposures CVE-2019-0950](#)
- [Microsoft Common Vulnerabilities and Exposures CVE-2019-0952](#)
- [Microsoft Common Vulnerabilities and Exposures CVE-2019-0956](#)
- [Microsoft Common Vulnerabilities and Exposures CVE-2019-0957](#)

This update contains the following improvements:

- Improves text extraction from PDF files that use certain fonts. This improves search accuracy.

- Adds support for the new Japanese era in the timeline portion of the **Project Summary web part** in Project 2016.

This update contains fixes for the following nonsecurity issues in SharePoint Server 2016:

- When you copy a web app content that references a web part from a list, a duplicated web part is displayed unexpectedly.

- When multiple SharePoint farms use the same extended zone and consume a published search service application, search queries from this extended zone don't return results.

- When you publish an InfoPath form, you experience long delays.

- The "ConfigSSC.aspx" page can't be opened if there's no User Profile Application (UPA) in the SharePoint farm. This issue occurs after you install [Description of the security update for SharePoint Server 2016: November 14, 2017](#).

- Synchronizing a notebook from OneNote 2016 to SharePoint Server 2016 fails, and you receive the following error message:

  We're sorry, something went wrong during sync. We'll try again later. (Error code: 0x803D0000)

- Certain calendar picker options for setting **CalendarWeekRule** update the value incorrectly.

- When you browse to a view in a list that contains more than 1,000 uniquely secured items, you receive an error message. This issue occurs if a combination of the required content approval, minor versions, and nondefault draft visibility settings is applied to the list.

- Share Point Server 2016 temporarily stops working during Zero downtime patching.

- Users who are subsite members but not the root site members can't run a search in subsites. After they trigger the search query, they are denied access. This issue occurs after they install [Description of the security update for SharePoint Enterprise Server 2016: December 11, 2018.](#)

- In a list that contains more than 5,000 items, when you apply a filter to two indexed columns, the view displays an error message.

- When you try to open an Office file in a search result by using the Edge browser, the file doesn't open, and you are prompted to select or find a program from the app store on your computer.

- When the locale of a page is set to **English(Canada),** the page can't be published on a schedule.

This update contains a fix for the following nonsecurity issue in Project Server 2016:

- Updating a local custom field lookup table values through the client-side object model (CSOM) may cause Project to crash.

Description of the security update for SharePoint Server 2019: May 14, 2019

Contains the following improvements:

- Adds support for the new Japanese era in the timeline portion of the **Project Summary web part** in Project 2019.

- Adds the **GraphicalIndicator** property to the [CustomField](#) class in the Client-Side Object Model (CSOM). You can now set and get a Graphical Indicator for a custom field.

- Improves SharePoint web part compatibility when the [aspnet:UseTaskFriendlySynchronizationContext](#) setting is set to true.

- When you run the Farm Configuration Wizard, the Access Service applications "Access Services 2010" and "Access Services" will now be unchecked by default. You can create these service applications by selecting these check boxes while running the Farm Configuration Wizard.

Contains fixes for the following nonsecurity issues:

- The sync/async feature for search results doesn't work after you install [Description of the security update for SharePoint Server 2019: December 11, 2018](#).

- When you try to open an Office file in a search result by using the Edge browser, the file isn't opened and you are prompted to select or find a program from the app store on your computer..
