Description of the security update for SharePoint Server 2019: March 12, 2019

Improvements and fixes

- Adds support for the new Japan era in SharePoint Server 2019.

- Editing a project-level custom field while on a project detail page (PDP) cuases lost task-level calculated custom field values if the field formula includes the task's Unique ID.

- When you upload content to a document library, selecting a destination folder doesn't work. This issue occurs when you open the SharePoint site by using the Microsoft Edge browser.

Description of the security update for SharePoint Enterprise Server 2016: March 12, 2019

Makes the following improvement in SharePoint Server 2016:

- Adds support for the new Japan era in SharePoint Server 2016

Contains fixes for the following nonsecurity issues in SharePoint Server 2016:

- Enforces setting the SharePoint database compatibility level to 110 to avoid high CPU use when you use Microsoft SQL Server 2017 in the SharePoint farm.

- Fixes issues that affect the SharePoint Properties pane if the title or name of a document contain special characters in a document library.

- When you use the modern UI experience in OneDrive for Business on a computer that has a low resolution, you experience navigation issues on the OneDrive home page. For example, the navigation area on the left and the hamburger button are not displayed.

- Drag-and-drop operations for folders in a document library don't work. This issue occurs if you access the document library through the Chrome browser and the document library displays a managed metadata column.

- Sometimes, SharePoint Server 2016 users can't be redirected to OneDrive for Business in SharePoint Online even if the hybrid OneDrive for Business feature is enabled.

- Property demotion doesn't work for Word documents that contain ink objects.

- Property demotion corrupts data of the Office Mix Add-in for PowerPoint.

Contains a fix for the following nonsecurity issue in Project Server 2016:

- Editing a project-level custom field while on a project detail page (PDP) causes lost task-level calculated custom field values if the field formula includes the task's Unique ID.

Description of the security update for SharePoint Foundation 2013: March 12, 2019

- This update adds support for the new Japan era in SharePoint Foundation 2013.

Description of the security update for SharePoint Enterprise Server 2013: March 12, 2019

This security update resolves a remote code execution vulnerability that exists in Microsoft SharePoint if the software does not check the source markup of an application package. To learn more about this vulnerability, see Microsoft Common Vulnerabilities and Exposures CVE-2019-0604.

Note To apply this security update, you must have the release version of Service Pack 1 for Microsoft SharePoint Server 2013 installed on the computer.
